About us

Find the winning solutions for your business.

Marmite is the leading European ODM and OEM manufacturer of high quality sinks, bathtubs and shower pans. We have developed Mineral Composite, one of the world's most outstanding materials. In the production process, we bring together natural mineral materials, sophisticated technology and develop highly efficient innovations offered to major brands and private labels all over the world.

Composed by **Marmite**

Our factories

Zakrzewo

6 production lines, 35 000 sq. m. of production area, established in 1990, production of bathtubs and sinks

Łowryń

1 production line, 40 000 sq. m. of production area, established in 2018, production of shower pans

Composition of Marmite

To create a unique proposition for your clients, you need substantial resources and many areas of competence. At Marmite, we have it all.

45 + years of experience	3 product categories	900 employees
2 factories	250 new products launched every year	2000 designs
7 fully organised production lines	40 countries	12 a week's leadtime for product development

production capacity of

2 000 000

units/year

Sustainability

We shape a better future.

For several years, Marmite has been working on sustainability and environmental improvements and has launched multiple initiatives and actions to develop the process. We continuously invest in new equipment, improve our facilities for cleaner, more efficient production. Every capital investment is evaluated from the environmental point of view.

We design responsibly.

Each Marmite product is designed to minimize the consumption of raw materials, to reduce the volume of production scrap and waste, and to ensure that our products can be easily recycled in the future. Regardless of the stage of product design, production, or shipment, at Marmite we follow the principle of Eco-Responsible Design. It means that we always take care of limiting the number of raw materials and reducing the volume of scrap and waste.

We use environmentally friendly materials.

We use natural raw materials, 75% of them are nature-based, gathered from sustainable sources. In the production process, we also use recycled materials and components. Nearly 10% of the resin we use comes from recycled sources. The use of natural stone makes our product timeless and very durable, as well as recyclable. The products can also be repaired and renovated, which further extends their life. Even the manufacturing processes are environmentally friendly as we consume no water or energy keeping the CO₂ emissions to a minimum.

The business model

Let's compose the winning solution together.

We operate in the B2B sector, fully supporting our partners at each stage of creating and implementing the products. Do you want to create a product from scratch? To refresh or extend your ranges? Or perhaps you intend to use award-winning catalogue products under your label? You have us on your side.

1

We provide bespoke products with a competitive edge.

Our comprehensive support services for customers include product design, own branding and individual packaging. We collaborate with our partners to review the existing product portfolios, to improve the design, quality and profitability, offering a real alternative to ceramic and acrylic items.

2

We also adopt the existing designs owned by our customers.

We can introduce efficient processes and technological capacities to production in less than 12 weeks and guarantee full compliance with all norms and regulations

3

Marmite proactively develops own catalogue of washbasins, shower trays and bathtubs.

At present we have a catalogue of 600 products; every year we develop 50 novelties. They can be offered to the customers and fully adopted to their requirements.

Tailor-made solutions

Choose your composition of added values.

Success always consists of many elements. For this reason, at Marmite we combine various product-related and other competences to provide solutions that make a difference. We can compose the right offer and support you at every stage of product implementation. Exactly as you need it and where you need it.

Design

Marmite's Design and Product Development Team is a perfect combination of creativity and technical knowledge.

The team's technical and creative background is supported by the knowledge of the cooperating experts from the Technology, Production and Quality teams. This results in extraordinary, best-selling designs and prizes awarded around the globe. The Design Department supports the customers, preparing customised projects to ensure that their specific needs are met. The Design Office detects and follows new trends in the bathroom market. As its leader, we set a new direction in the world of design.

We have been proudly awarded with:

BT 0081 62 1/4 inch

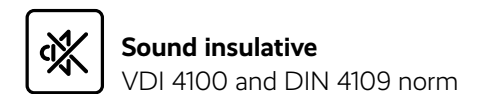

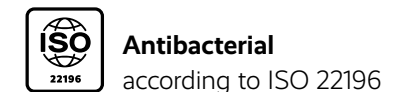

Quality

The Marmite's products meet all legal standards and safety regulations required in the bathroom market.

The company has an internal laboratory which ensures the products' quality. It works towards further product innovations. We test all the material components as well as the physical and chemical properties of all our products.

Our certifications

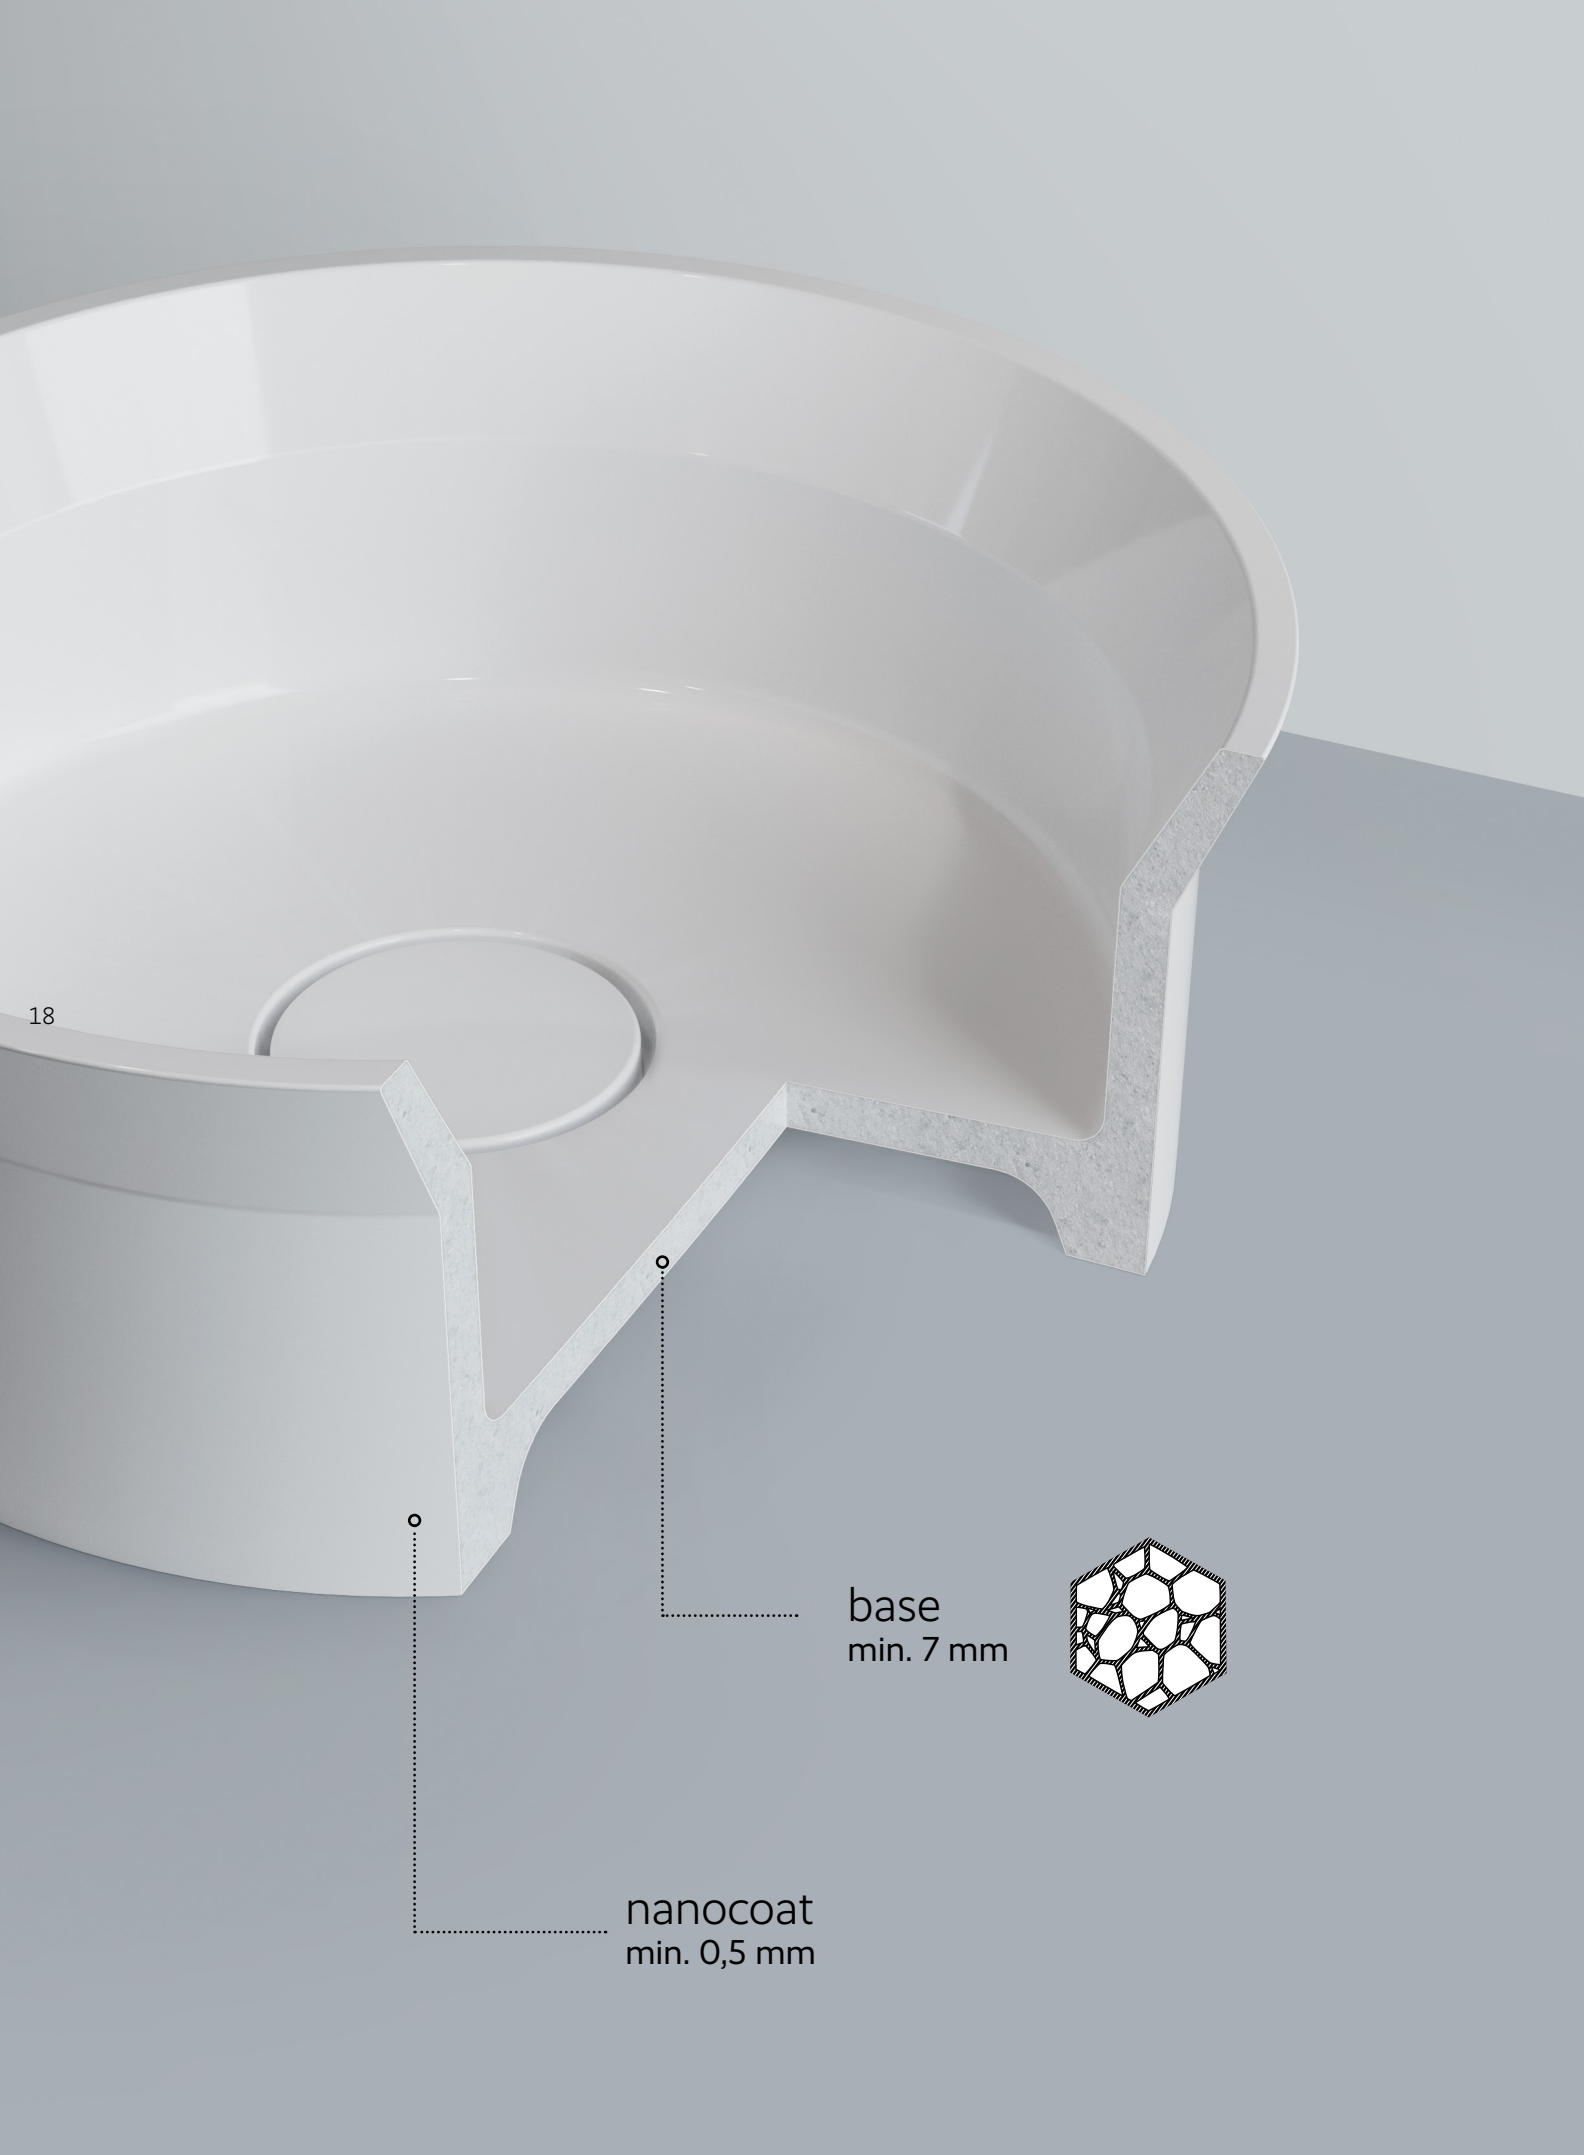

MINERAL COMPOSITE

The contemporary design trends exceed the capabilities of traditional materials. By choosing Mineral Composite, you are where your customers' preference and dreams are.

Some 250 million years ago the Earth was a place of much greater volcanic activity than today. Limestone strata were transformed into dolomite under high temperatures and enormous pressures. This rock is very hard and durable material with superior characteristics.

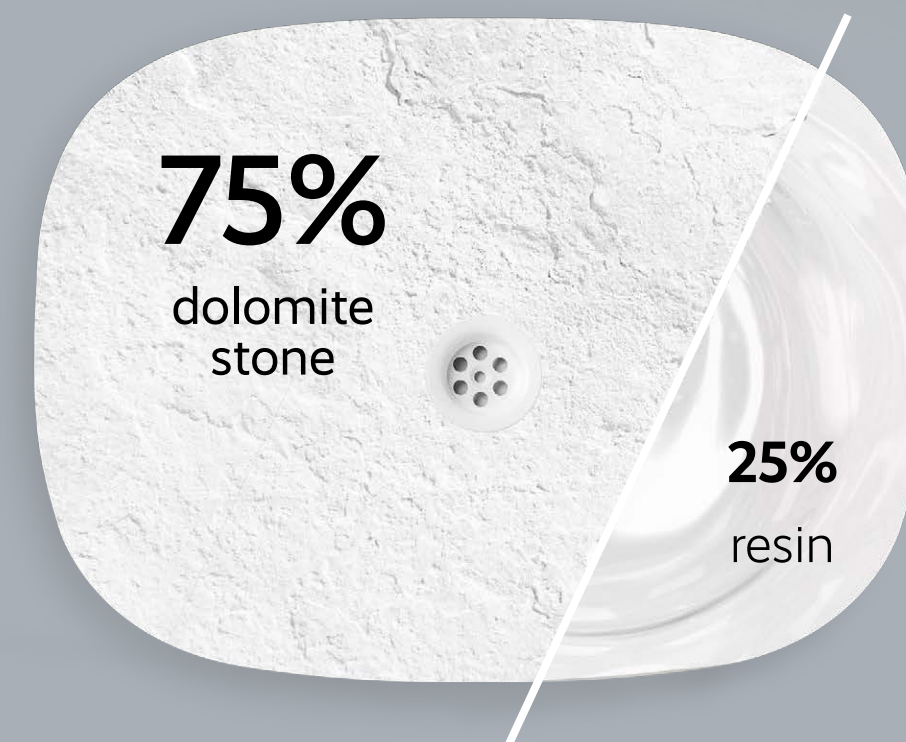

Thanks to technology developed by Marmite, rock that was formed millions of years ago is turned into resistant and beautiful modern products. The combination of dolomite and elastic resin imparts unparalleled durability and impact-resistance to Mineral Composite. The resin also provides unlimited possibilities for moulding products made from this technology.

MINERAL COMPOSITE

The external surface is covered with nanocoat. This type of coating is also applied to the surface of yacht hulls and wind turbine blades – places exposed to constant contact with the elements of wind and water.

Its main constituent is calcium and magnesium carbonate – $\text{CaMg}(\text{CO}_3)_2$ – a snow-white mineral with a crystalline structure. Mineral Composite is a material that fully utilises the extraordinary properties of dolomite.

Warmth

Due to the combination of natural heat conduction and efficient temperature insulation, Mineral Composite absorbs warmth from the water and air around it. Products made from Mineral Composite maintain an optimal temperature for a long time, they are always warm to the touch and provide unprecedented comfort in the bathroom.

Durability

Mineral Composite is a unique structure, where the dolomite stone is reinforced with flexible binder of resin which ensures resistance under load, damage from impact and the effects of high and low temperatures. It guarantees security of transport, installation and everyday use. Products remain in a brand-new condition for many years.

MINERAL COMPOSITE

Sound Insulation

Mineral Composite offers exceptional acoustic absorption. This feature comes from the high particle density of the material. It prevents the sound of water striking a surface, and so improves living comfort and convenience of use significantly.

Precision

With a 0-3 mm tolerance, and a minimum radius of 2 mm, Mineral Composite enables an extensive range of shapes to be created that frees up the imagination of designers. Radiuses, dimensions and edges cease to be a challenge and material precision is easy to achieve. Perfect fit to furniture and shower enclosures go beyond any other traditional material.

Design Flexibility

The material's innovative structure gives freedom of form, therefore countless designs are available. It offers a variety of absolutely unique shapes in classic and modern style. Natural stone surfaces and thin walls are the elements of excellence that set Mineral Composite apart.

Superior Finish

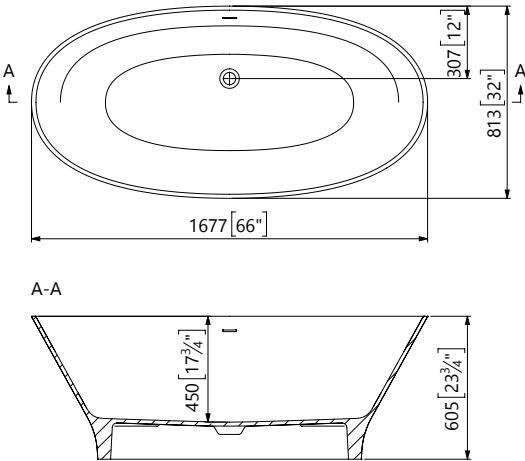

Thanks to smooth finish, Mineral Composite products are always pleasant to the touch. Our sinks, shower pans and bathtubs are resistant to even the most extreme conditions due to the inherent strength of the nanocoat surface. Its imperviousness to bacterial growth, absorption of water and chemical substances, ensures long lasting quality and ease of care.

Colours

Our colours are inspired by nature, endowing the products with a unique character and making them a perfect match with the decor of a modern bathroom. While this selection is our standard offer, Mineral Composite allows us to create products in any colour. Consequently, we prepare colours tailored to the customer's expectations at his or her request.

-  Washbasins
-  Shower trays
-  Bathtubs

Textures

The underlying force behind our designs is constant attention to the textures that we select. We offer a wide range of textures, inspired by the beauty and richness of nature, reproduced with great precision. However, Mineral Composite offers unlimited possibilities so we can also prepare a texture designed with you in mind.

Cleaning and Care

Mineral Composite is easy to clean!

For standard cleaning of gloss and matt finishes alike, we recommend widely available, non-abrasive cleaning products. Owing to its natural origin, the material is suitable for cleaning with natural, inexpensive agents like vinegar and water with lemon. Matt finishes may occasionally require a mildly abrasive product.

Our material is resistant to:

Cosmetics

e.g. hair dye, lipstick, nail polish

Detergent ingredients

e.g. acids, alkalis, bleaching agents, methylene blue

Everyday use stains

e.g. juices, cigarette stains, crayons

The material has the benefit of being easily repairable.

Minor defects like chips and scratches can be removed; individual users, can use one of the repair kits recommended by Marmite.

Watch our movie

Repair Kit

For professional repair of damage and scratches.

Key benefits:

- All colours available
- 3 months of use suitability
- All necessary components are included

Touch-up Stick

A new means of quick and easy repair of minor damage and scratches inflicted at home.

Key benefits:

- Safe to use and environmentally friendly
- 5-year shelf life
- Easy to use by inexperienced users

Polishing Compound

A water-based polish emulsion recommended for Mineral Composite products.

Key benefits:

- Removes scratches
- Refreshes the gloss
- Free of silicone, wax and aggressive thinners
